

PRESS RELEASE

msg and Stibo Systems Take Partnership to a New Level

The goal of the cooperation is to offer customers from a variety of industries tailored and efficient solutions for managing master data from a single source.

Munich, May 14, 2019. IT and consulting company msg is intensifying its partnership with Stibo Systems – the leading provider of a multi-domain solution for managing product and customer data, as well as vendor and location information. A new joint large-scale project for a specialist wholesaler of hygiene and cleaning supplies is taking the partnership between the two companies to a whole new level of collaboration.

With the rapid progression of digitalization comes the demand for data management systems that span all industry segments and that allow business partner and product data from different sources to be brought together. After all, the centralized management of master data increases the quality of the data, which in turn, enhances the efficiency of business processes – a must when it comes to successful digitalization. With their multi-domain solution, Stibo Systems offers precisely that type of central master data management and they rely on msg as their consulting and implementation partner to help make that happen. This partnership gives customers a one-stop shop for everything they need, from holistic consulting, IT that meets their needs, as well as services, all from a single source.

“The partnership with msg is a win-win for both sides,” says Jan Richter, Alliance Sales Executive and Area Manager at Stibo Systems for partners in Central and East Europe. “Their extensive know-how in different industries, their long-term experience in the field of master data management and their strong consulting team makes msg a key cooperation partner for us.” msg and their consultants play an important role in joint customers projects, especially when it comes to working for and with customers to draft strategies for the [perfect data management](#).

In 2016, analyst firm Gartner named Stibo Systems a challenger in the Gartner quadrant for master data management for the company's multi-domain solution for master data management (MDM). 2016 was also the first year Gartner published a quadrant for master data management. This fact shows how relevant the topic of master data management has become in recent years and reflects the realization many customers have come to that, in these times of digitalization, they need to build their business on reliable master data. "We are pleased to be working with our partner Stibo Systems – a lead global provider of MDM solutions – to realize customer projects from a 360-degree perspective. The widely accredited and tested solution by Stibo Systems forms a strong IT basis for meeting the requirements customers have for their master data management," explains Guido Göbel, Head of MDM at msg.

msg will be attending this year's [customer and partner event CONNECT](#), which Stibo Systems is hosting in Copenhagen from May 19 to 21, as a Gold Partner. International experts in MDM use the conference as an opportunity to network, while customers share their success stories with attendees and partners host break-out sessions to report on the key challenges that need to be mastered in MDM business in the age of digitalization.

Stibo Systems

Stibo Systems, the master data management company, is the trusted source of MDM solutions based on a unique business-first, people-centric approach.
